Education

- National Institute of Technology, Srinagar** *Mar 2021 - Jul 2025*
BTech in Computer Science, GPA: 7.46
- Jawahar Navodaya Vidyalaya, Kathua** *Jun 2018 - Jun 2020*
Higher Secondary Education (Non-Medical), Percentage: 90%
- Jawahar Navodaya Vidyalaya, Kathua** *Apr 2016 - Apr 2018*
Senior Secondary Education, Percentage: 78.4%

Experience

- Data Engineer (Rashmi Metaliks Limited)** *Jan 2025 – Present*
- Designed and maintained scalable data systems using PostgreSQL, Prisma, and React.js, supporting **1,300+ leads valued at \$1B+** across **1,000+ users**; developed data models, reporting pipelines, and MIS dashboards to enable business analytics and data-driven decision-making.
 - Built data-driven CRM workflows integrating Gemini AI and external services, automating **60+ business processes** through forecasting modules, system integrations, and intelligent workflow automation.
 - Developed an NLP-powered resume parsing system using **500+ keyword heuristics**, transforming unstructured resumes into structured datasets and reducing manual screening effort by **70%** while improving candidate matching accuracy.
 - Implemented an IMAP-based email ingestion pipeline processing **1,000+ applications** in real time, enabling automated data extraction, normalization, validation, and storage in relational databases for downstream analytics and reporting.

Projects

- Real-Time Car Number Plate Extraction (ANPR)** *Mar 2026 – Apr 2026*
- Built an Automated Number Plate Recognition (ANPR) pipeline to process real-time video streams, extracting and transforming vehicle data into structured records for downstream analysis.
 - Developed a data processing workflow using OpenCV, YOLO, and OCR techniques to automate vehicle information extraction from unstructured image data with high accuracy.
 - Designed data ingestion and storage mechanisms for recognized vehicle records, enabling applications such as traffic analytics, toll management, and monitoring systems.
- House Price Prediction using Machine Learning** *Jan 2026 – Feb 2026*
- Built an end-to-end data pipeline for real-estate datasets, performing data collection, cleaning, transformation, feature engineering, and validation on structured housing data.
 - Conducted exploratory data analysis and developed predictive models using Python and SQL-based data processing techniques, achieving an R^2 score above 0.90.
 - Implemented automated data preprocessing and model evaluation workflows using cross-validation, enabling reliable analysis of large housing datasets and performance monitoring through RMSE and R^2 metrics.

Technologies & Skills

- **Languages:** Python, SQL, C++.
- **Data Engineering:** ETL Pipelines, Azure Ecosystem, Pyspark, Data Warehousing.
- **Data Analysis & ML:** Pandas, NumPy, EDA, Machine Learning, Statistical Analysis.
- **Databases:** PostgreSQL, MySQL, SQL Query Optimization.
- **Backend & Tools:** FastAPI, REST APIs, Docker, Git, Linux.
- **Core CS Concepts:** DSA, DBMS, OOP's, Operating Systems, Computer Networks.
